

GÖKTEKİN GROUP BACKGROUND

While there is no capital or commercial affiliation with Göktekin Enerji, the first flagship company of the family, Göktekin Dış Ticaret, started its operations back in 1979, for the purpose of selling white goods and small home appliances manufactured under the brand name **GOSONIC**. Starting its export operations in 1988, the company abandoned its domestic operations from 2001 onwards and focused exclusively on export operations, becoming one of the most reliable home appliance brands in the Middle East. Reaching an annual mean export value of USD 100 Million, the company became a leader in these markets, owing to its product diversity and a wide dealership and service network.

Our founder Abdullah Göktekin grew his own business in the USA after graduating from two US-universities, majoring in International Trade Management and Administration. In 2014, he went to Erbil as the Iraq Country Manager of **GOSONIC**. Serving in this position for 1,5 years, Abdullah Göktekin left his position in Göktekin Dış Ticaret with the founding of Göktekin Enerji in 2015.

GÖKTEKIN ENERJI THROUGH THE YEARS

Our company is an engineering firm founded in 2015 for the purpose of providing EPC (Engineering, Procurement & Construction) services. Spending the year 2016 as a preparatory period working on organizational structuring and strategic planning, we obtained all the relevant technical qualification certificates and quality certificates within the same year. On top of all of that, our company is the first EPC company who earned the right to operate as a consultant by obtaining the "Energy Efficiency Consultant" (EEC) certificate as a result of the training provided by the Ministry of Energy and Natural Resources. Beginning its project operations in 2017 and focusing on the construction of land-based solar power plants, our company first completed the Konya Kulu SPP with an installed capacity of 4.725 kWp and then installed two SPP in Afyon with an installed capacity of 1,069 kWp and started its EPC operations.

In 2018, we completed a 2 MW SPP in Nevşehir and a 6,5 MW SPP in Yozgat with our own resources and became an investor in the sector. Within the same year, we completed different projects for public and private sector investors and reached a total installed capacity of 13 MW. We also became the Turkey distributor of SolarEdge, a leading inverter brand in the Europe and US rooftop SPP markets, and began our commercial product sales operations.

In 2019, in line with our objective to further expand our investments, we installed land-based SPPs with a capacity of 13.700 kWp in Van, 12.414 kWp in Diyarbakır, 11.600 kWP in Osmaniye and 4.000 kWp in Adana, and our SPP investment portfolio reached a total installed capacity of over 50 MW. Within the same year, in Samsun, we installed the 5.2 MW Yeşil Küre Solar Power Plant, which was the third biggest rooftop SPP in Turkey at the time of commissioning, including roof and building reinforcement works. Continuing these achievements, we completed 13 new projects over a total capacity of 50 MW and we had a strong start in the rooftop SPP segment.

In light of the Self Consumption Regulations entering into force in May, we predicted the rapid growth potential of the rooftop SPP market and shaped our organizational structure according to the new market dynamics. In 2020, we set out to establish regional offices throughout Turkey and opened our first office in May in Istanbul. With the establishment of our Ankara and İzmir offices shortly after, we created a wide service network that covers the Mediterranean, Southeastern Anatolia, Marmara, Central Anatolia and Aegean regions. Thanks to this, we increased our focus on rooftop SPP projects significantly. Although we spent the better part of 2020 under Covid-19 restrictions, we managed to complete 35 projects by the end of the year, most of them being rooftop SPPs, with a total installed capacity approaching 100 MW. 29 of these projects were managed and completed simultaneously. In addition to these efforts, we became the distributor of important panel manufacturers such as Hanwha and HT-SAAE. We completed and commissioned the 24 MW Adilcevaz-Alages, which is our licensed SPP investment, in Bitlis.

Increasing our rate of growth in the sustainable energy sector, we also started developing projects on wind power on top of solar power. By the end of 2020, we commissioned the first turbine for the 49.7 MW Metafor in Bingöl, which was our first wind power plant (WPP) project.

In addition to conducting new projects in the rooftop SPP sector, we built on our strong start with Metafor, increasing our WPP investment to 81 MW with the 33.6 MW Yakaağzı in Ağrı. Carrying out the 50.4 MW Çerkeş plant in Çankırı, the 33.6 MW Karamürsel plant in Kocaeli, the 37.8 MW Hamsi and 4.2 MW Fener plants in Sinop simultaneously, we are aiming to increase our EPC experience in wind power to a total installed capacity of 209 MW by the end of 2022.

Pursuant to our medium-term plans, we have also started working on Biomass power in addition to solar and wind power. In the upcoming days, we are going to complete the purchase of a biomass power project in Aksaray with a capacity of 16 MW. We are also executing projects, which will be completed within 1,5 years with an approximate capacity of 500 MW, based on two different business models, which will meet the electrical power requirements of massive industrial and service sector groups in Turkey.

On top of all this, we will also build on our experiences on sustainable energy in Turkey, carrying out foreign renewable energy projects with a total capacity of 1.000 MW, which have already been signed in three different countries as of today. Our long-term goal is to become a global player in the renewable energy sector. In line with this goal, over the course of 5 years, we are planning to generate at least 80% of our revenue from our operations in foreign countries, while also maintaining our position as the leading EPC company in Turkey.

Our company took the number 10 spot in the list for The Fastest Growing Companies in Turkey, which was published in 2022 by the Turkish Union of Chambers and Commodity Exchanges, and also came 444th nationwide and 30th in the energy sector in the list for The 500 Biggest Companies in Turkey, which was published by the Fortune magazine.

Abdullah GÖKTEKİN *Chairman of the Board of Directors*

Dear Sun Enthusiasts,

After the oil crisis of the 1970s, the importance of energy was better recognized by all the countries in the world. After this crisis, countries started to take major steps towards diversifying their energy sources and use alternative energy sources. Especially the countries that import their energy started focusing on the sustainable usage of energy. By the 2000s, efforts on renewable energy systems picked up pace throughout the World, and rapid developments were seen with the advancement of the technology. As solar power is one of the most abundant sources on earth in terms of sustainable energy sources, it was seen that countries placed special importance on the use of solar energy. Many states, including Turkey established significant regulations and incentive mechanisms for the purpose of generating electricity from solar energy.

According to the data from the International Renewable Energy Agency, the total installed capacity of solar power worldwide is 583.500 MW, while this figure is 6.232 MW for our country. Although the use of solar energy in our country dates as far back as the 70s, the most significant trend towards development that can be considered as a milestone was seen in 2015 and in fact, in 2017, we achieved the top spot in Europe as the country that installed the most number of solar power plants (SPP). Between the years 2009 to 2014, while I was studying in the USA, I have personally witnessed the importance of the solar power sector, especially in terms of household installations, on the development of the country's industry and the growth of their economy.

When I returned to Turkey, I realized that I was looking for alternatives to increase the strength of our industry players who were in competition with world-class brands in foreign and domestic markets and to reduce their costs. Anticipating the future importance of the renewable energy sector for our country, I founded Göktekin Enerji in 2015. Göktekin Enerji is an engineering firm that provides EPC (Engineering, Procurement & Construction) services. In line with our long-term strategies, our country spent the year 2016 as a preparatory period, established its technical and administrative infrastructure and successfully completed all the necessary certification procedures. Acting on the main principle of achieving efficiency, our company became the first and only EPC company that holds the Energy Efficiency Consultant (EEC) certification, which is issued by the Ministry of Energy and Natural Resources. The self-consumption regulations that entered into force in our country in 2019 paved the way for future rooftop SPP investments. I believe that this will transform the solar energy sector into a 10-billion dollar market. The lower investment costs compared to the previous years with the help of the recent developments in relevant technologies have made solar power more attractive. Additionally, we can expect an even further growth in the market from 2021 onwards, with the gradual implementation of hybrid plant models.

As a result of our analysis, we have concluded that, aside from technological advancements, the main reason behind the rapid growth of the renewable energy sector in Europe and in the US was to create right financing solutions. Therefore it was imperative that we support our industrialists in their quests to achieve long-term and affordable financing in rooftop SPP investments. For this purpose, we provide financial consultancy services to our clients, helping them find the right financing solutions through the strong banks in our country. With the everevolving technologies used in the field of solar power becoming increasingly more affordable, SPPs have now become very profitable investments that pay for themselves in no time.

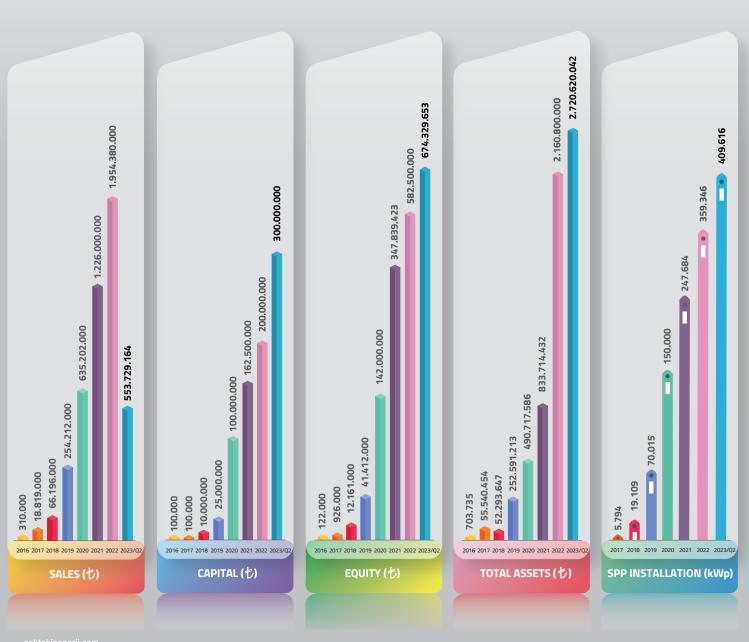

The lion's share of our country's foreign trade deficit is made up of energy imports. One of the most important factors behind our decision to found Göktekin Energy was our desire to reduce this foreign dependency and ensure that our industrial players are able to generate their own energy and have better global competitive power.

As Göktekin Energy, to this day we have finalized more than 100 SPP projects with a total installed capacity exceeding 240 MW. In order to support the energy production of our country, we have carried out SPP investments in different provinces for more than 50 MW of installed capacity. Additionally, by the end of 2020, we have commissioned the first turbine of our 50 MW wind power plant (WPP) investment, ensuring eligibility for YEKDEM (Renewable Energy Sources Support Mechanism).

At the beginning of 2021, we have increased our focus on WPP projects and added 5 new WPP investments in different regions of Turkey to our portfolio. Our target is to reach a total installed wind power capacity exceeding 209 MW by the end of 2023. In addition to solar and wind power, we also aim to commission at least 2 biomass investments within this year.

GÖKTEKİN ENERJİ **IN NUMBERS**

OUR AREAS OF ACTIVITY

Turnkey SPP Application (Process Management from A to Z)

- 🖓 Investment and Process Consultancy
- 👹 Creating Consumption Analyses
- Field of Application Survey
- 🕅 Production Simulations
- 🖉 Investment Feasibility
- 冷 Permits and Bureaucratic Process Management
- 🗐 Project Design
- ∰ Optimal Product Supply
- 🗳 Implementation and Installation
- For Testing, Commissioning and Acceptance Procedures
- 📲 After Sales Maintenance and Operation
- Monitoring (Performance Monitoring)

EEC

(Energy Efficiency Consultancy)

- Preliminary Survey
- Detailed Survey
- Efficiency-Increasing Project Designs
- Energy Management

Commercial Product Sales

- Turkey Distributor of HT-SAAE Solar Panels
- Turkey Distributor of Solaredge Inverters

Maintenance | Operation Services

WHY GÖKTEKİN ENERJİ?

Production

guarantee

performance

EPC over 400 MW, Rooftop SPP over 300 MW installation experience, more than 160 different roof SPP projects

80 MW WPP investment

"Independent Technical Consultant Auditing" throughout the term of application

Process management from A to Z including distinguished roof and building reinforcement services by Göktekin Yapı Göktekin

All Risk Installation Insurance throughout the term of application

High standards of occupational health and safety

For 2 years after project delivery; ~ Monitoring services

(Full-time production and performance monitoring)

- Periodic maintenance and testing
- Monthly production and performance reporting

The first and only SPP installer (EPC) that holds the Energy Efficiency Consultancy (EEC) certificate issued by the Ministry of Energy and Natural Resources

Expert and experienced technical and administrative staff, mostly engineers

Product selection and supply from the world's top and leading brands

GÖKTEKİN ENERJİ OPERATION, MAINTENANCE & REPAIR SERVICES

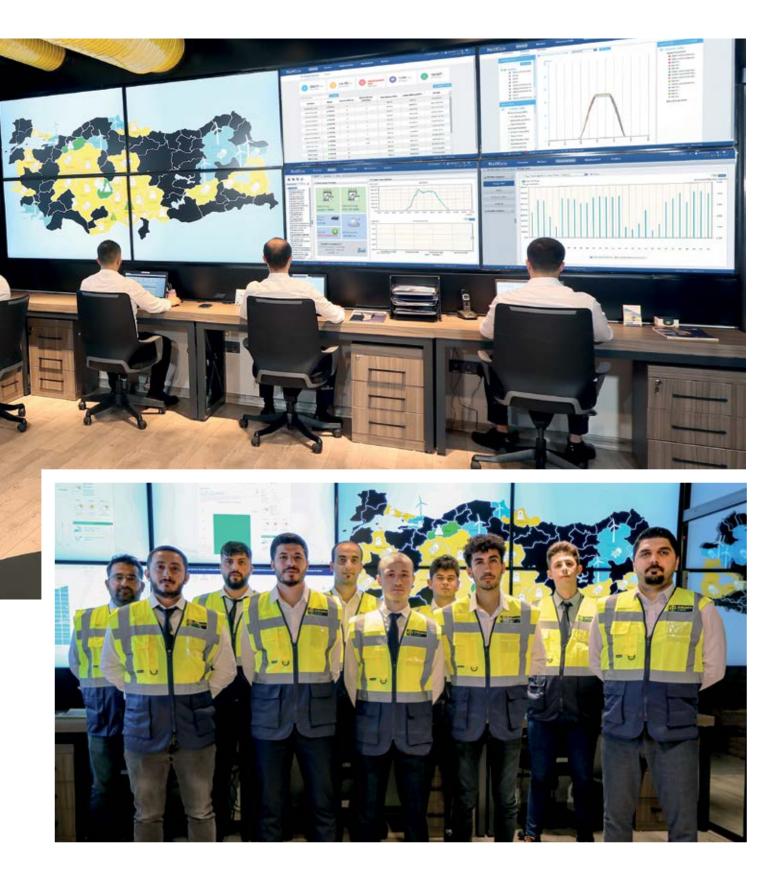

Another one of our service models that will provide added value to your company after the turnkey project design and delivery of your solar power plant, is our operation, maintenance and repair services.

The most important purpose of these services that are provided by a special team consisting of engineers who are experts in their field, is to ensure that the solar power plants that we install run with maximum efficiency. This allows us to reduce the time required for the return on your SPP investment and prolong its service life. Our monitoring division within the operation, maintenance and repair team review the critical parameters

goktekinenerji.com

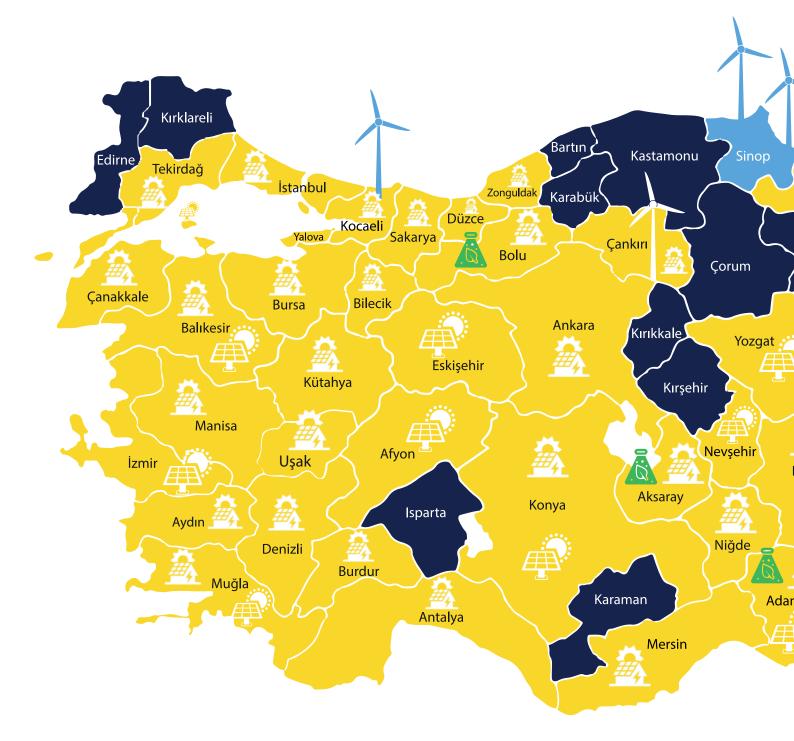

pertaining to your solar power plant on a continuous basis and ensure that they produce optimal levels of energy.

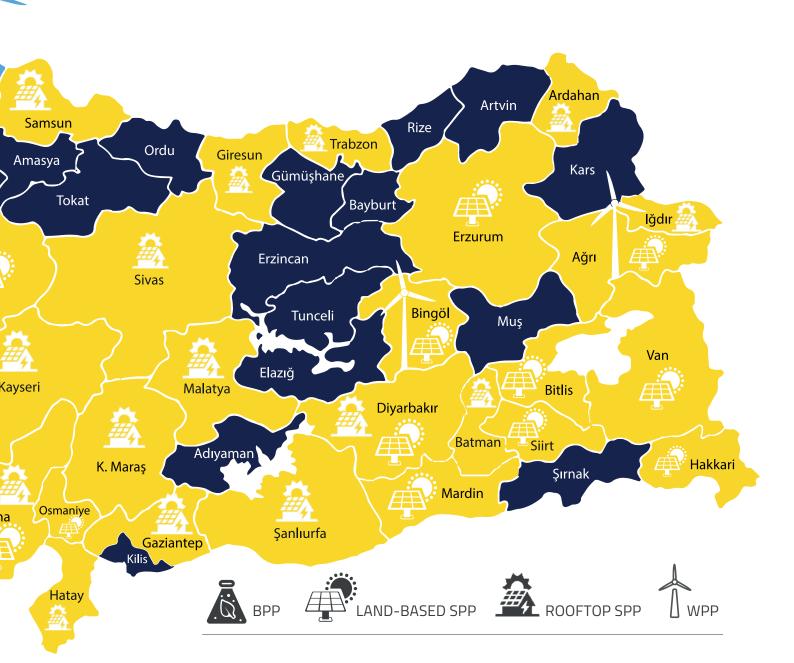

In case of a failure that may affect the efficiency of your plant, the monitoring division identifies the issue instantly. The necessary response is planned and coordinated from a single central location. With visits from the remote access or on-site teams, it is ensured that the failure is remedied as soon as possible. All analyses and system data collected with regards to the condition of your SPP investment are shared with you on a regular basis. Your solar power plant is constantly supervised within the framework of this transparent structure and it is ensured that your company has access to clean energy at all times without interruption.
